

ROGATOR PRE SEASON INSPECTIONS

In partnership with Croplands we offer an after sales support program to provide a greater overall customer experience. A new initiative of this program is a pre-season inspection of your Croplands self propelled sprayer by a highly trained service technician.

The inspection will identify any potential issues for your sprayer and applicable warranty work if still within the warranty period. The comprehensive 106 point check is designed to inspect the entire sprayer and is estimated to take approximately 4 hours.

The inspection includes, but is not limited to the following:

- Drive train
- Software updates required
- Any incomplete field campaigns
- Sprayer and chassis components
- System pressure checks
- Serviceability of hoses and lines
- Wear and tear on various parts
- General inspection of the machine

Please contact your local Agwest branch to book in for your pre season inspection.
